# HYBRID LILACS

**Known also as FRENCH LILACS**

**L**IACS thrive best in a sunny location and in a well drained soil. They prefer a neutral soil and are benefitted by applications of lime over the soil above their roots, if the soil is inclined to be acid. Bonemeal is one of the best fertilizers to use. This may be mixed with the soil at the time of planting, at least a pint to a bush, and should cover an area at least 2 feet in diameter.

Our lilac stock is propagated on their own roots, also grafted and budded, and all are established on their own roots before being sold. They are stocky, well developed plants, even in the smaller sizes, and with proper planting and care usually bloom the second year. They need be planted only slightly deeper than they were in our gardens. We do not prepay transportation on lilacs and recommend express shipments.

Sizes and prices:	12 to 18 inches.....	\$1.50
	18 to 24 inches.....	2.00
	2 to 2½ feet.....	2.25
	2½ to 3 feet.....	2.50
	3 to 4 feet.....	3.00

(S) indicates single. (D) indicates double.

## LIST OF VARIETIES OF LILACS

<b>Alphonse-Lavalle.</b> (D) Rosy to lilac blue.	<b>Mme. Lemoine.</b> (D) White, late.
<b>Buffon.</b> (S) Pink, early.	<b>Mrs. Edward Harding.</b> (D) Tourmaline pink.
